

# Design your individual sustainability journey

Our service is situationally adapted to your needs and goals and consists of various modules that you can choose from. With thorough consulting upfront, we will compile an ideal package of services for you.

Choose from various modules!

## 1 Individual consulting with you

We will define individual requirements and targets and check for needed solutions. Subsequently, you will receive a plan to define the next steps. This service requires a previous evaluation at a Syntegon lab.

## 2 Material testing at Syntegon laboratory

Testing of suitable, more sustainable packaging materials for your machine executed at our Syntegon laboratories. If wished, materials will be run on one of our test machines that conform with your formats and equipment on site. You will receive a detailed test report including recommended adjustments to your machine and parameter settings.

## 3 Processing of packaging material

**Case-by-case option**  
Syntegon will test several different forming and sealing units to determine the ideal retrofit for your machine. You are welcome to visit the lab at our factory to see the testing live.

## 4 Producing samples of packaging styles

(Additional step or at the beginning of your project)  
Production of various samples made with different packaging materials to give you a better idea of the look and quality of your future packaging product.

Please contact your local Syntegon partner to start your sustainability journey. We will answer any of your questions and provide a detailed, individual consultation to get your project started.

You will find your local partner at:
